JOHN WADE

Welcome

'Small but perfectly formed' is a phrase that perfectly describes many of the subjects of this week's cover

feature. I've always believed that photographers are more alert than most people to the visual details of their surroundings but this applies even more so to close-up and macro shooters. The winners of this year's Close-Up Photographer of the Year not only noticed those tiny details but captured them beautifully, and they told CUPOTY founder Tracy Calder the stories behind the photos. Also this week we look at 'instant' photography before Polaroid came along, and Ukraine before Russia invaded. Plus reviews of a new GoPro and a Lee Friedlander book. If you enjoy this issue why not save money by subscribing? See page 29 for details. Nigel Atherton. Editor

The cover image was taken by David Hammond. See more stunning macro images and techniques from CUPOTY in our article on page 16

Budget phones hope to be lucky 13

The Redmi Note 13 Pro

CHINESE smartphone maker Xiaomi has announced the Redmi Note 13 line-up, following on from its Note 12 range, which are among the best budget phones available.

There are five new phones – the Note 13 Pro+ 5G, Note 13 Pro 5G, Note 13 Pro, Note 13 5G, and Note 13 – designed to offer powerful camera features at an affordable price. The higher-end Pro models include a 200MP camera with optical image stabilisation, 2x/4x 'lossless' optical zoom for more detailed close-ups and distance shots, a large 1/1.4in sensor and improved image processing.

'The combination of this sensor, a superlarge f/1.65 aperture, and Tetra2 pixel (advanced pixel-binning technology) delivers clear and bright pictures even in poor lighting conditions,' Xiaomi claims.

Meanwhile, the base models, the Note 13 5G and Note 13, are each equipped with a 108MP main camera with 3x lossless zoom. All the new phones also feature an 8MP ultra-wide camera, 2MP macro camera and a 16MP selfie camera, as well as a wide selection of filters. The Note 13 Pro+ 5G also has IP68 dust- and water-resistance certification, with the rest of the models upgraded to IP54 dust- and splash-resistance.

The Redmi Note 13 Pro+ 5G starts at a competitive \pounds 449, while the cheapest model, the Redmi Note 13, costs \pounds 199. They are available now from www.mi.com/uk

Lace up for the Great British Photo Walk

NEED some motivation to get out into the countryside this winter? AP has announced The Great British Photo Walk, in collaboration with *The Great Outdoors* magazine (www.thegreatoutdoorsmag.com) and sponsored by smartphone maker Tecno.

Every week we'll be selecting a stunning landscape photograph from around the UK to share on our social media. 'Rolling hills, river valleys, impressive mountains and tumbling streams, urban and remote countryside, coast, farmland, forests and cities – the British landscape is

very diverse,' said AP's deputy online editor, Jessica Miller.

To take part, simply tag us on Instagram or Twitter (@ap_magazine) with #TGBPW or email jessica. miller@kelsey.co.uk with 'The Great British Photo Walk' in the subject line. Selected images will be shared on AP and *The Great Outdoors* social media platforms. Submissions can have been taken at any time, and captured on digital, film or smartphone cameras.

Take part by entering a UK landscape shot you have taken

Last call for food contest

The Pink Lady Food Photographer of the Year, one of the biggest and most diverse competitions in the photography calendar, closes for entries on Sunday, 4 February. Now in its 13th year, the competition has two new categories: the Tiptree Cake Award for captures of, you've guessed it, cake; and the James Beard Foundation Award for images that celebrate the people behind America's food culture. The overall competition winner gets £5,000. See pinkladyfoodphotographeroftheyear.com

.....

The new 35mm Rollei

Rollei 35AF film camera

Mint Camera has revealed that its new 35mm film camera will be called the Rollei 35AF. It's a new version of the Rollei 35, the smallest 35mm film camera on the market on release in 1966, but this time it will feature autofocus. The Rollei 35AF is expected to be released in the summer, with the price to be between \$650-800. 'Basically, Mint is risking the whole company to get this project off the ground,' said founder Gary Ho on a blog post. See rollei35af.com

Viewpoint Ross Samson

An AP reader wonders if there's a deeper reason why there are so few 'laugh out loud' photos

mateur Photographer once had a columnist who wrote

humorously under a silly pseudonym. His account of taking an acquaintance to a drinking establishment where the walls were bedecked in Robert Mapplethorpe prints, only realising later it was a gay bar, was particularly funny (assuming it actually happened). Then there was the fabulous, acerbic columnist, Roger Hicks. He

once wrote a spoof encyclopaedia account from the future about the digital 'bubble' in photography at the start of the millennium.

Not afraid to offend, Roger recounted how he and his partner Frances, cycling in France, would cry out 'lone tree, lone tree!' in mockery of amateur photographers who snapped them, mistaking themselves for artists. Today the magazine's pages are thin on humour and controversy. The editors may feel that their customers - delicate amateurs - need gentleness, encouragement and a sense of purpose, not debate. Moreover, we appear to live in the Era of Hurt Feelings, when there is no 'wrong' way, only 'alternative' ways, and everyone is free to self-identify as an expert or visual storyteller. But here's the thing - my radical hypothesis is that photography doesn't lend itself to humour.

Here comes the pun

When I say that few photographs are funny, many will disagree. The names Elliott Erwitt and Martin Parr will be thrown back at me, but the very fact that these two names jump out is probably evidence of how rare they are. On its 70th birthday, a Magnum Photos curator

Visual puns are now a mainstay of more humorous street photography

chose one image to represent each year of its history. Only one was a laugh: Richard Kalvar's image of two men in front of the fountain at the Pantheon, Rome (presumably 1980 was a quiet year for plague, famine and pestilence.) I once heard a camera-club judge say that funny photographs simply cannot win competitions. He offered no further explanation and was not the brightest pundit I have met. But he may have had a point.

Flick through your pile of AP or the digital editions. You will find cute photographs that make you smile, other images may generate a wry grin, but scarcely one will make you laugh out loud. Some of the best street photographs rely on 'visual puns' (Google the wonderful Peacock Skip image by Matt Stuart.) This also describes Erwitt's best pictures of dogs. But I've come to the conclusion that photographs do not tell jokes, and they don't make speeches. They just don't talk. They are images – and pictures and words are not the same.

AP reader Ross describes himself as a 'keen and competent' amateur photographer and he helps to run a photography group in Glasgow. Visit www.samsonwithoutdelilah.co.uk

Do you have something you'd like to get off your chest? Send us your thoughts in around 500 words to the email address on page 3 and win a year's digital subscription to AP.

Pickup by Lee Friedlander

£45, Steidl, hardcover, 88 pages, ISBN: 9783958295018

A humble American icon becomes the star of the show in this book by the RIEDLANDER noted photographer Lee Friedlander, says Amy Davies

To us Brits, the pickup truck is not a particularly usual sight on our roads (or at least, it isn't where I live). But for Americans, they're ordinary and ubiquitous. In this volume, Lee Friedlander takes a look at this mode of transport which has perhaps come to be a quintessential representation of the American people over the past century.

Of course, while we might not see them so much on our own roads, our close connection with American culture means that we're verv familiar with pickups too and so a look at the cars somehow evokes a sense of familiar nostalgia. The beds, usually laid open to the elements, holding all manner of things from farm tools to spare tyres, animals or even the occasional person being something we're very used to seeing visually represented.

Timeless style

These images were taken across many years, ranging from the 1960s all the way up to more recent times. That said, their timeless style and the fact they're shot in black & white makes it hard to distinguish which pictures come from which era. Situated against classic American backdrops of deserts, city skylines and remote motels removes a distinct sense of time too.

It makes for an interesting study of what you can achieve if you bring together the same subjects from an extensive archive, particularly if you might otherwise think the subjects are relatively mundane - put them together and suddenly it becomes quite engaging, and often strangely fascinating or amusing. You also get an appreciation for how such an experienced and respected photographer thinks - with noticeable patterns in his observations across the decades.

Lee Friedlander is often considered to be one of the greats of photography, and if you're not familiar with his work, or perhaps you're looking for an entry into it, it's worth exploring a book like this. On the other hand, if you're already a Friedlander aficionado, this is a good one to add to your collection.

'It makes for an interesting study of what you can achieve if you bring together the same subjects from an extensive archive'

Books & exhibitions

The latest and best books and exhibitions from the world of photography

Bruce Springsteen & The E Street Band: Darkness on the Edge of Town by Lynn Goldsmith

£600, Taschen, hardcover, 364 pages, ISBN: 9783836589932

This XL book is obviously really only one for the collectors among you – whether that's of photography books or Bruce Springsteen ephemera. However, if that's your thing, you're in for a real treat here

with a collection of never-before-seen photos taken of 'The Boss' and his legendary E Street Band.

Taken by Lynn Goldsmith in the late 1970s, they show off a hungry-for-success Bruce and the group as they record his classic album, hang out together, rehearse, go on relentless tours and more besides.

This is one of Taschen's 'XL' books, and as such it weighs a huge 4.11kg and has 364 sumptuous pages – it's a beautiful thing, with each copy of the collector's edition numbered and signed by Lynn Goldsmith herself.

Wonderland - The Secret World of Mushrooms by Jan Vermeer

£35, teNeues, hardcover, 192 pages, ISBN: 9783961715107

We know that mushrooms are a very popular photography subject among our readers, with these small wonders seeming to open up a world of possibilities when you get up close.

If you're looking for inspiration, this is a great book. Dutch photographer Jan Vermeer's mission to seek out a huge variety of different mushrooms results in an intriguing set of beautiful images, sometimes in abstract and sometimes more straightforward.

All taken in his home country, it's an interesting look at the ecology of the country too. The pictures are accompanied by useful texts, describing how the fungi are useful in applications such as medicines – but also warning of the dangers of some of them. We also get an insight into the challenges he faced as a photographer putting together the project, too.

LETTER OF THE WEEK

Man of the moment

I was sorry to read that John Heywood now finds photography boring (Inbox, 9 January). I am only slightly younger than he and can remember as a schoolboy developing and printing photographs at my local camera club on a cold Saturdav afternoon.

The thrill of seeing pictures being created will live with me forever. I look at some of the photos I took then and wonder how, technically, I was able to take them with pretty basic cameras.

However, time moves on. Whilst it is true that technology means even toddlers can now take technically proficient photos, it's the creative element that makes the difference and there is much to celebrate. Just look at Jo Bradford's excellent photos which she takes on her mobile.

Mobiles also mean you are more likely to capture that moment. I attach a photo which I took on my mobile and which gives me so much pleasure. For me, it's my Cartier-Bresson 'moment'. The unselfconscious joy that the little boy is showing would have been missed had I been struggling with a conventional camera. Okay, I'm maybe kidding myself about the

Bill took this shot with his smartphone

quality of the image, but because I had my mobile in my pocket, I was able to capture an image that no one else did. This gives me so much pleasure and which proves that photography need never be boring. Just think of all those moments waiting to be captured! **Bill Thomson**

What do other readers think? Do you also feel jaded with modern photography, or, like Bill, do you continue to find joy in the 'decisive moments' of everyday life?

SVMSANG A Samsung 256GB PRO Ultimate SDXC memory card. The PRO Ultimate card offers read speeds of up to 200MB/s and write speeds of up to 130MB/s. The good book

I must admit to being disappointed by your feature on self-publishing (AP 9 January) as I expected more than a taster featuring someone who had made just one

book. I am now on my ninth book having started in 2009 with a collection of pictures recording the slow demise of the old ways in Scottish malt whisky distilleries. My subsequent books have

featured traditional brandy making in the villages of North Romania and two featuring natural history found on lengthy walks from my home in the suburbs of Aberdeen. I've learned a great deal

in this exercise and would love the opportunity to pass it on to others. It has been an extraordinarily satisfying period in my life, which while not financially profitable, has greatly enriched my social circle. I have printed in China, in Lithuania and in the UK in volumes from 3,000 down to 100. You can check out or buy my work at broombankpublishing.com Ian McIlwain

They'll be back

Martin Annand's striking images (AP 9 January) exemplify the maxim 'less is more'. And it could apply to equipment too.

This was brought home in the review of the Nikon Z f (same edition). Clearly wonderful in many ways (more is more?), but with questionable ergonomics and the absence of an intuitive aperture ring in the case of Nikon Z lenses.

Nikon's retro camera philosophy incidentally reminds us that 'enough is plenty'. What could be more engaging than an old Nikon FM or F3 with a Nikkor AI lens and a properly integrated full-frame digital back? It's been done for medium format (Hasselblad. Phase One), Innovators have shown that this technical approach is possible at 35mm, albeit in clunky implementations, but mainstream commercial equipment has not been forthcoming.

A Nikon film back is easily removed, so a digital back could be swapped in equally easily. The film wind could prepare the back to capture the next image. The cassette space could hold the battery, and so on. But perhaps somebody wants us to buy new £2,000 mirrorless camera bodies at regular intervals... **Phil Davies**

Technique CUPOTY 5

Close to perfection

Entrants to Close-up Photographer of the Year 5 share the stories and techniques behind their pictures with competition co-founder **Tracy Calder**

pparently. Leonardo da Vinci used to get up every morning and write a list of all the things he wanted to learn that day. You've got to admire his drive, and the fact that he died at the ripe old age of 67 (life expectancy was around 35 back then) seems to suggest that his thirst for knowledge might have played a part in keeping him alive. While I share none of da Vinci's polymath brilliance, I do share his desire to learn something new every day. Imagine my delight, then, when I had the joy of spending more than 20 hours chatting to a group of brilliant scientists, naturalists, journalists, writers and photographers while judging Close-up Photographer of the Year 5 (2023)!

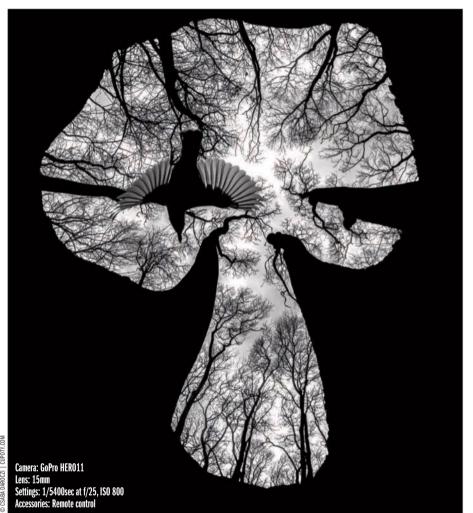

Thanks to these wonderful individuals I now know that tadpoles can eat birds. ants fire acid like water pistols and bees sometimes hold each other's legs while they sleep. And then, of course, there is the knowledge gained from looking at the photographs and accompanying captions sent in. More than 11,000 creative and original pictures made by people whose passion and dedication to the craft of photography is abundantly clear. Personally, I think this is our best survey of close-up, macro and micro photography yet, and I'm so grateful to those who have provided the opportunity to see and learn from their work. I hope you feel the same.

This year there were 11 categories: Animals, Insects, Butterflies & Dragonflies, Invertebrate Portrait, Underwater, Plants, Fungi & Slime Moulds, Intimate Landscape, Human Made, Micro and Young CUPOTY. Csaba Daróczi took the overall title with his incredible image of a bird taken from inside a tree stump, while Carlos Pérez Naval was named Young Close-up Photographer of the Year 5 for his unusual picture of a Moorish gecko in a 'petrified forest'.

To see the winners and Top 100 pictures from CUPOTY 5, visit www.cupoty.com. To stay up to date with all things CUPOTY, sign up to the newsletter.

Overall Winner (and winner of the Animals) category **Csaba Daróczi**

The Bird of the Forest

Category: Animals Nationality: Hungarian

Occupation: Photographer

Occupation. Photographer

Further information:

www.daroczicsaba.hu, Instagram: @daroczics

'In the winter of 2023, I took a lot of photographs in a forest close to my home in Hungary. I found something new to photograph almost every week, and I spent several days exploring ideas and perfecting techniques. Staying curious and open-minded led me to this hollowed-out tree stump, which measured around half a metre in diameter. I carefully positioned my GoPro 11 camera inside the trunk and took a few shots. I was amazed by the results. After a few days, however, I decided the composition might be improved if I included an animal in the frame. So, I returned to the spot and placed a sunflower near the hole, which the mice and birds soon found.'

CSABA'S TOP TIPS

1The GoPro is great for experimental shots because it offers generous depth of field, even at such a wide aperture.

2To make the most of opportunities as they arise, get to know your equipment – that way you can act quickly and intuitively. Camera: Olympus OM-D E-M1 Mk II Lens: Olympus M.Zuiko Digital ED 60mm f/2.8 Macro Settings: 1/2sec at f/4, ISO 200 Accessories: Tripod, cable release, three extension tubes, Raynox 250 Post processing: 74 images stacked in Zerene Stacker. Basic adjustments in Lightroom and

Winner: Insects **René Krekels** Wood Ants Firing Acid Secretion

Category: Insects

Nationality: Dutch

Occupation: Biologist

Further information: Website: www.renekrekels.nl, Facebook: rene.krekels

'I had been studying the lifestyle of wood ants in the Netherlands for work when I noticed that the defending ants of a very large ant's nest seemed eager to scare me off by spraying acid towards me. Luckily it wasn't that destructive, and it provided me with a great opportunity to photograph them defending the nest.'

RENÉ'S TOP TIPS

1 Know your subject and its ecology, so you can anticipate its behaviour.

2Be sure that your trousers are not easy to climb up or you'll get a tickling bite in your belly or arms from the ascending ants. **3**Come back during different seasons to see different behaviour.

Winner: Fungi & Slime Moulds **Barry Webb** The Ice Crown

Category: Fungi & Slime Moulds Nationality: British

Occupation: Gardener/photographer

Further information:

Website: www.barrywebbimages.co.uk, Instagram: @barrywebbimages

'I found this one-millimetre-tall slime mould (Didvmium squamulosum) in leaf litter carpeting a woodland floor in Buckinghamshire. It was a cold January day, and the frost had formed a crown shape on top of the fruiting body. I had to be very careful not to breathe on it. During a previous attempt with another slime mould, my breath had melted the ice when I inadvertently got too close.'

BARRY'S TOP TIPS

1Be careful not to breathe on frosty or icy subjects! 2 Frosty mornings can create unique images, so wrap up warm and don't be put off by inclement weather.

3Always be on the lookout for the unusual. I use a loupe to fully explore the possibilities presented by tiny subjects such as this.

Winner: Butterflies & Dragonflies Csaba Daróczi The Wedding Cuest

The wedding duest
Category: Butterflies & Dragonflies
Nationality: Hungarian
Occupation: Photographer
Curther information , www.daracticsaba.hu. Instagram. @daractics

Further information: www.daroczicsaba.hu, Instagram: @daroczics

'I was photographing a wedding in a forest clearing in the beautiful surroundings of Uzsa, Hungary. The hall lights attracted a lot of insects to rest on the windows. At one point, I saw some guests taking pictures with their phones next to one of the red lights. As I moved closer, I noticed that an oak peacock moth (Antheraea yamamai) had taken up residence on the window. I waited until everyone had finished their pictures, and then it was my turn.'

CSABA'S TOP TIPS

Light can be used to attract animals, be ready to seize any opportunity.

2 Take advantage of good fortune - stay open-minded and ready for action.

3 Try to tell a story with your picture – understanding the behaviour of the butterfly certainly helped here.

Technique CUPOTY 5

Winner: Invertebrate Portrait **Tibor Molnar** Jumping Stick

Category: Invertebrate Portrait Nationality: American

Occupation: IT Manager Further information:

Instagram: @thetibormolnar

When we travelled to Ecuador, I knew there would be an opportunity to see jumping sticks in the Amazon region. When we found the first of several creatures, I was beyond excited. I had imagined this shot in my mind for a long time and it was incredible to actually have this opportunity to make it happen. The best way to describe these invertebrates is part walking stick part grasshopper! When they jump, they are not particularly graceful, and they tend to tumble around completely off-balance.'

TIBOR'S TOP TIPS

1 Do your research ahead of time. If you know that you will be visiting a particular area, learn what to expect there.2 Using a flash and diffuser will help you to record all of the striking details.

3Focus stacking will enable you to get more of the subject sharp.

Camera: Olympus OM-D E-M1 Mk II Lens: Olympus M.Zuiko 60mm f/2.8 Macro Settings: 1/50sec at f/5.6, ISO 100 Accessories: Godox V350o flash with Cygnustech diffuser Post processing: Seven frames stacked in Helicon Focus, Topaz DeNnice

Winner: Human Made **Elizabeth Kazda** Asymmetrical Threads

Category: Human Made Nationality: American

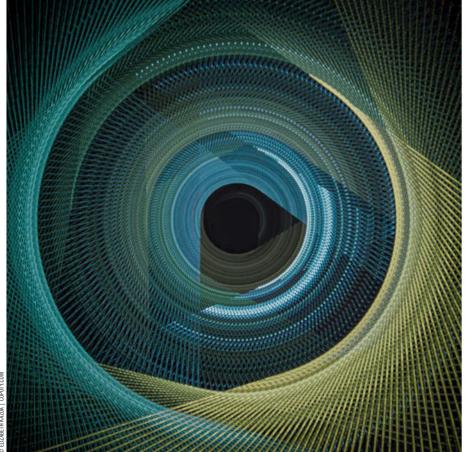

Occupation: Artist Further information:

Website: elizabethkazda.myportfolio.com, Instagram: @elizabethkazda, Facebook: beth.kazda

'I enjoy pushing the limits of my camera's capabilities and experimenting with new techniques to capture ordinary objects. My collection of art supplies includes numerous spools of coloured thread from previous projects. I wanted to photograph this thread in a unique way and came up with the idea of wrapping coloured strands around an open picture frame. I placed the frame on a motorised rotating platform and set my camera to multiple-exposure mode. I captured 64 photos of the thread at 64 equidistant positions as I rotated the platform. Since I didn't complete a 360° rotation, the design is asymmetrical. This is a meticulous process that requires patience. For this image, I used an in-camera multiple exposure of 64 frames to output a single raw file.'

ELIZABETH'S TOP TIPS

1Photograph everyday objects in unexpected ways. Try varying the lighting to change the composition.2Experiment with the camera's multiple exposure mode.

Camera: Nikon D850. Lens: Nikkor 24-85mm. Settings: 1/5sec at f/4.5, ISO 64 Accessories: Tripod, remote shutter release, ring light, motorised rotating platform

Winner: Micro **Gerhard Vlcek** Beach Grass

Category: Micro Nationality: Austrian Occupation: Senior project manager

Further information: Website: www.foto-vision.at, Instagram: @gerhardvlcek, Facebook: FotoVisionat

'This image shows a 30µm crosssection of beach grass (Ammophila arenaria) stained with Auramin O and Safranin and viewed under fluorescence blue excitation. The grass came from a friend's garden in Vienna. For the best results I had to slice the sample as thinly as possible. First, I fixed some stems in warm liquid polyethylene glycol. As it cools down, it turns solid, and the embedded stems were placed in a microtome and sliced with a sharp blade. Staining and preparing the sample was very tricky. I had to use the tiniest brush to manipulate the less than 1mm parts in different staining and chemical solutions before positioning the stems on the slide. After that, taking the photograph was the easy part!'

GERHARD'S TOP TIPS

1Find interesting plant structures and use a microtome (cutting tool) to prepare very thin cuts for a sample.

2Use fluorescent dyes for staining.

Camera: Nikon Z 611 Lens: Olympus SPlan Apo 10/0.40 microscope objective Settings: 1/3sec, ISO 100 Accessories: Olympus BH-2 microscope Post processing: Panorama of two pictures stitched together in Lightroom and cropped in the centre to reveal the interesting structures. Basic adjustments in Photoshop

Camera: Nikon Z 6 Lens: Nikkor AF-S 16-35mm f/4 ED Settings: 1/320sec at f/9, ISO 1250 Accessories: None

Winner: Intimate Landscape Csaba Daróczi

UNUCIOW		
Category: Intimate Landscape		
Nationality: Hungarian		
Occupation: Photographer		
Further information:		
www.daroczicsaba.hu, Instagram: @daroczics		

'In the first days of May, I always return to a small canal near Izsák, Hungary, where the water violet (Hottonia palustris) blooms in huge numbers. Unfortunately, flowering was delayed this year and only the leaves were still underwater. I was about to go home when I saw a tree had fallen over the canal and under its reflection the plants were clearly visible. I found it a very exciting subject and played with it for a while.'

CSABA'S TOP TIPS

1Often picture opportunities present themselves when you're about to pack up and go home. Stay a little longer and see what arises.

2 Find a location with potential and visit it repeatedly in all weathers.

3Play close attention to your surroundings – it takes good observational skills to spot a picture like this.

Technique CUPOTY 5

Winner: Plants **Ria Bloemendaal** Reflexion

Category: Plants Nationality: Dutch

Occupation: Retired remedial educationalist

Further information:

Website: www.riabloemendaal.nl, Instagram: @riabloemendaal33, Facebook: riabloemendaal

'I spotted this reflection in the water at Trompenburg Botanical Gardens & Arboretum in Rotterdam, and it instantly inspired me to make an "impressionist painting". I've always felt connected to nature, and I use photography to show who I am, what I feel and how I see the world. When I make pictures, I often become completely focused on the subject and can enter a flow state that causes me to forget everything that's happening around me.'

RIA'S TOP TIPS

1Pay attention to reflections in the water – everything is constantly moving, and new compositions will present themselves every few seconds.

2Attend workshops and read as much as you can about art and personal expression.

3Explore your immediate environment before heading further afield – many interesting pictures can be made on your doorstep.

Camera: Canon EOS 6D Mark II Lens: Canon 70-200mm f/2.8 L IS II USM Settings: 1/400sec at f/2.8, ISO 100 Accessories: Tripod Post processing: Basic adjustments in Lightroom, cropped and flipped

Camera: Nikon D850 Lens: Nikkor 85mm f/2.8G Settings: 1/200sec at f/14, ISO 64 Accessories: Sea & Sea Housing, YS-250 Pro Strobes, INON UCL67 +15 Wet Dioptre (underwater close-up lens), snoot

Winner: Underwater **Simon Theuma** Dreamtime

Category: Underwater Nationality: Australian Occupation: Education trainer

Further information:

Website: www.simontheuma.com.au, Instagram: @simontheumaphotography, Facebook: Simon Theuma 'Like an intricate tapestry of the marine ecosystem, this image captures the relationship between a commensal shrimp and a mosaic sea star. Dreamtime Aboriginal art reminds us of the delicate balance that exists in the grand tapestry of our natural world – this ancient wisdom serves as an important reminder to preserve what we have. To capture this image, I needed to use a snooted strobe, which was set at an acute angle to the subject. This set-up accentuated the depth and beautiful texture of the two organisms. Additionally, I enhanced magnification by using a +15 wet lens dioptre.'

SIMON'S TOP TIPS

1Start taking pictures from a distance so you don't disturb the subject, then move gradually closer.

2Use light creatively to enhance textures.3Mastering buoyancy skills is not only crucial for the safety of the diver but also plays a crucial role in preserving marine life and capturing sharp and clear images underwater.

Winner: Young Close-up Photographer of the Year 5 **Carlos Pérez Naval** Small Wonders

Category: Young Close-up Photographer of the Year

Nationality: Spanish

Age: 17

Further information: Instagram: @cpereznaval

'In the wall of some houses in Calamocha - the village in Spain where I live – it's possible to find pyrolusites. These magnesium minerals create stunning formations, which look just like petrified trees, but they are so small that they're tricky to spot. One day, I was lucky enough to find a Moorish gecko (Tarentola mauritanica) very close to the pyrolusite's wall, so I tried to make the most of the encounter. I've wanted to capture a gecko in the "petrified forest" for a long time, but they only recently appeared in my village (probably carried in fruit baskets from hotter areas). Due to climate change they can now survive here.'

CARLOS' TOP TIPS

1Beauty is all around us but sometimes we have to really pay attention to find it. 2Be patient. You might have to wait a long time for a shot that you've

previsualised to come together. 3 Experiment with composition. Break some of the 'rules' of photography once in a while!

2nd Place: Fungi & Slime Moulds **Jay Birmingham** Autumn Emergence

Category: Fungi & Slime Moulds

Nationality: British Occupation: Teacher

Further information:

Website: www.jaybirmingham.com, Instagram: @jaybirminghamphotography, Facebook: Jaybirminghamphotography, Twitter: @Jay_B_Photos

'I came across some honey fungi in my local woodland, just as the sun was rising and lighting up the woods with golden hues. The bonus was the bracken behind, which gave the picture a wonderfully warm autumnal feel. I used a wide aperture to isolate the fungi and maximise the bokeh in the background.'

JAY'S TOP TIPS

1Use a wide aperture and a long lens to capture some wonderful bokeh.

2 Focus stack to keep as much of the subject in focus as possible, whilst still being able to use a wide aperture.

3Go out early or just before sunset. Although fungi will be there all day, the light at these times is at its best.

Camera: Canon EOS R5 Lens: Sigma 180mm macro f/2.8 Settings: 1/60sec at f/3.2, ISO 500 Accessories: Beanbag and small light to fill the shadows at the front Post processing: Focus stacked using Helicon Focus. Basic adjustments in Lightroom

Technique CUPOTY 5

Camera: Olympus OM-D E-M5 II Lens: Olympus M.Zuiko 60mm f/2.8 macro Settings: 1/1250sec at f/11, ISO 200 Accessories: Godox V350o flash, Cygnustech Diffuser

3rd Place: Animals **David Joseph** Natural Architecture

Category: Animals

Nationality: Nigerian Occupation: Student

Further information: Instagram: @abcdee david

'It was probably my first experience with a sac spider, photography-wise. The spider had become alert, as my diffuser had touched some nearby grass. I was mad at myself for not taking the shot before the spider was aware of my presence. It was only my second month with a camera, so I was still learning. The few seconds I had with it (after it became alert) made my heart beat fast – I would have been so annoyed if I'd missed the shot.'

DAVID'S TOP TIPS

1Think first, shoot second. It's important to pre-visualise the end result as you might not have long with the animal.2Approach slowly. Spiders are very alert, and you don't want to disturb one and miss the picture.

3You may only get one shot. Make it count; focus accurately.

Camera: Canon EOS R6 Lens: Canon EF 100mm f/2.8L Macro IS USM Settings: 1/80sec at f/5.6, ISO 320 Accessories: Ring flash

Finalist: Animals **Juan Jesus Gonzalez Ahumada** The Tadpole Banquet

Category: Animals Nationality: Spanish

Age: 17

Further information: Instagram: @jjgahumada

'This image shows the harsh reality of nature, how the death of one can mean life for others. This young sparrow probably fell into the pond on its first flight and drowned, but its death will not be wasted as the tadpoles feed on this unusual offering that fell from the sky. I had to wait patiently for the bird to spin slowly into the right position and reveal its lifeless eye, which gives the picture drama and meaning. It was the middle of summer in Andalusia, and it was a battle to control the unforgiving and difficult light.'

JUAN JESUS'S TOP TIPS

1Never touch the water or you'll frighten the wildlife and disrupt the scene.

2Cultivate the mindset of always being ready for a photographic opportunity.

3 It's easy to forget composition and fire away. Spend a few moments making sure the framing is right.

2nd Place: Plants **Wim-Vooijs** Tears in My Eyes

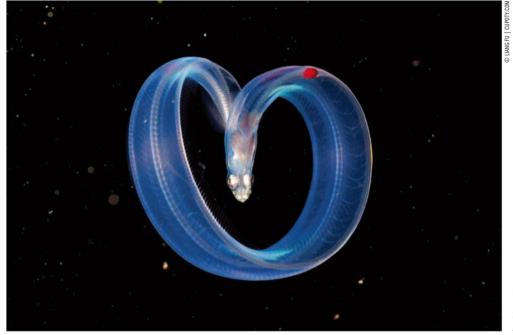

Category: Plants
Nationality: Dutch
Occupation: Process consultant
Further information: Instagram: @wimvooijs

'I discovered a field covered with sundew, a small carnivorous plant. There were lots of silver-studded blue butterflies flying around and occasionally one would get caught and trapped in the sundew. Instead of photographing one of those poor victims, I favoured another approach. I wanted to capture the innocent and alluring beauty of the plant, the way a butterfly might see it in its last moments. To do this, I used a vintage Pentacon lens to capture the sundew as a pair of eyelashes on seductive eyes – the beauty of your last view.'

WIM'S TOP TIPS

1 Try to tell a story with your picture. Not an obvious one, but one the viewer can create for themselves.
2 Go for character, rather than perfection. Using vintage lenses may add an extra interesting layer to your capture.
3 Give yourself time to get fully involved in a location. Nature will hand you different opportunities that will give your images a personal signature.

Camera: Canon EOS R5 Lens: Canon RF 35mm f/1.8 Macro IS STM Settings: 1/200sec at f/13, ISO 400 Accessories: Underwater housing, underwater flash x2

less than ten seconds before swimming down and disappearing into the darkness.'

LIANG'S TOP TIPS

Proximity is essential. Blackwater critters are typically tiny, so you must get very close without spooking them.
2 Good buoyancy is essential for blackwater photography – it allows you to get closer to your subjects and take better photos.
2 A 25 mm ar 60 mm long is heat for

3A 35mm or 60mm lens is best for blackwater macro photography.

'This photograph was taken during a blackwater dive in Romblon, Philippines. Blackwater diving is a type of scuba diving that takes place at night in the open ocean, with thousands of metres of water below the boat. Divers descend a rope with underwater lights as their only orientation system. When the tide and moon phase are right, creatures from the deep migrate to shallower waters. This vertical migration is one of the most remarkable natural phenomena. During the dive, I saw something shining under my searchlight at 28 metres deep. As I swam closer to investigate, I found a lava moray eel curled into a heart shape. I was extremely fortunate to capture this moment with my camera. The eel remained at that depth for The premise of Brand's podcast was that he was getting beneath the surface of things, so Harry picked this fallen tree that had some of its bark off as the location for his early images in the shoot

When Harry Met...

Russell Brand

Harry Borden looks back on a 2017 shoot with the controversial comedian, author, actor and influencer

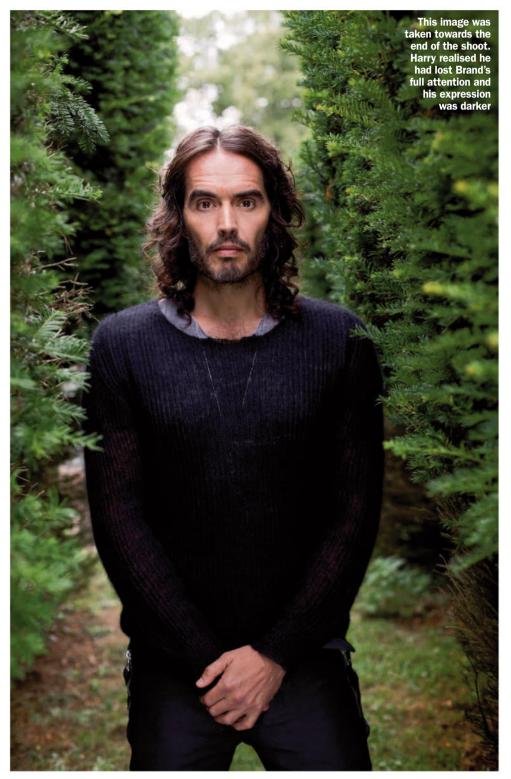

n the summer of 2017, the *Guardian Magazine*'s picture editor commissioned me to shoot portraits of Russell Brand. He was then in the process of publicising a new book, *Recovery*, and my pictures would be used alongside an interview with him by journalist Miranda Sawyer.

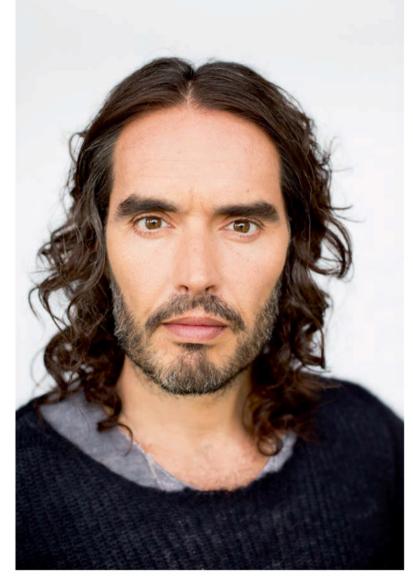

At the time, I was a big fan of Brand and was excited to get the chance to meet and photograph him. I hadn't been particularly drawn to his earlier incarnation, as the host of *Big Brother*-related TV programmes. However, he had completely reconfigured the way he was perceived and I really liked his podcast, Under The Skin, in which he interviewed well-known guests. He came across as someone who was intelligent, engaging and loquacious, with an alternative viewpoint.

Brand carefully guards his private life and didn't want the shoot to take place at his Oxfordshire house, so it was arranged that I would photograph him at a country spa hotel nearby. I wanted to show him that I wasn't just a celebrity photographer, so I took a copy of my book, *Survivor: A Portrait of the Survivors of the Holocaust*. It had recently been published and I thought he would like it. I also took along one of Brand's earlier books, that I'd been given as a present by my son, for him to sign.

I arrived early and looked around the hotel interior and grounds for good locations. Then Brand arrived, wearing a dark top and trousers and white trainers. He looked really healthy, had amazing skin and a vitality that was compelling. He was also taller than I expected, around 6ft 2in. His eyes were clear and intense and he looked me right in the eyes, so I knew he'd be really easy to photograph.

But before we started, I gave him my book, and immediately realised it was a mistake because he didn't even try to feign an interest in it. I'm sure he just left it at the hotel or gave it to a charity shop. I had

Above: At the time, Harry liked the pictures, but now he thinks they look a bit like PR images rather than giving an insight into Brand's character

Above right: For the shoot, Harry used his Canon EOS 5D Mark III, and mainly used natural light

assumed he was a deep thinker, but at that moment I realised he wasn't really interested in anyone other than himself and what he personally was doing.

I was shooting with my Canon EOS 5D Mark III, and, as always, mainly used natural light. Some of the pictures were taken inside the hotel, where we were given a big room to work in. For some shots I set up a plain white Colorama backdrop. In areas where the natural light wasn't so good, I also shot a few images with a small on-camera Quantum flash unit that I keep in my camera bag.

Afterwards, we went outside and did some more shots in the hotel grounds. In one part of the grounds, I saw a fallen tree that had some of its bark off. As the premise of Brand's podcast was that he was getting beneath the surface of things, I thought it was a nice visual metaphor, so I asked him to stand on and around the tree. I felt quite pleased with myself that I'd found it and Brand's expression suggested Above: Brand's eyes were clear and intense and he was easy to photograph, but Harry didn't feel he knew anything more about him after the shoot than he did beforehand thoughtfulness and humility.

As regular *When Harry Met* readers will know, I always try to get as much variety in my images as possible, so towards the end of the shoot I asked Brand to pose between two lines of conifers in the grounds. By that time, I realised I'd lost his full attention and his thoughts had moved onto whatever he was doing next. The light was behind him so the images are moodier, but also his expression was darker and more serious.

Brand had been compliant with me during the shoot, though I had heard from other photographers that he could be difficult. He had also given me more time than I expected, so it's possible that showing him the *Survivor* book had at least made him realise that I was a serious photographer. But despite having that extra time with him, I didn't really feel I knew anything more about him after the shoot than I did before it.

The public perception of Brand has changed dramatically since 2017,

particularly since a Channel 4 documentary featured several women who alleged they had been raped or sexually abused by him – accusations which Brand has denied. Further allegations of controlling, abusive and inappropriate behaviour have also surfaced, all of which, at the time of writing, are under investigation.

Photos can become recontextualised over time and inevitably, the numerous allegations about him have shaped the way I see the pictures from the portrait shoot. At the time, I liked the pictures taken inside the hotel and outside on the tree, but now I think they look a bit like PR pictures rather than ones that give an insight into his character. I took the bait and gave the world the message he wanted to project.

When I review the whole series of photographs, the ones taken at the end of the shoot seem quite sinister, because they're intimate and close, but they're also dark. I feel that those portraits – taken when he had dropped his guard and was keen for the session to end – reveal more about the true nature of the personality behind the public persona.

As told to David Clark

Harry Borden

Harry Borden is one of the UK's finest portrait photographers. He has won prizes at the World Press Photo awards (1997 and 1999) and in 2014 he was awarded an Honorary Fellowship by

the Royal Photographic Society. The National Portrait Gallery collection holds over 100 of his images. His new book, *On Divorce: Portraits and Voices of Separation*, is published by The School of Life.

Love lof the land

A new book by Marc Wilson and Anna Nekrasova-Wilson based around a Ukrainian village has taken on a larger context amid the current war. **Peter Dench** finds out more hotographer Marc Wilson explains how it felt to arrive in the remote Ukrainian village where

his latest project began: 'It was a strange feeling... As soon as I arrived, I felt this real need to start making photographs. I work a lot and I take a lot of pictures for my projects, but I don't take a lot of general photographs when I'm out and about. I don't snap. I probably don't take enough family photos when I'm travelling. I like to really care, and the photographs I've taken have some meaning. So this strange thing happened when I arrived in this village. It was this incredibly beautiful place. I remember watching village life unfold. I wasn't certain why or what I was making these images for, but I knew they would be for something.'

The small village Marc describes is Balakliya, located in the Poltava region of central Ukraine, 280km east of the capital Kyiv (there's another Balikliya further east and one to the south west). Marc first visited Ukraine in late 2018 to produce work for his book, *A Wounded Landscape: Bearing Witness to the Holocaust*. He collaborated with producer and fixer Anna Nekrasova. They fell in love and became inseparable.

Marc visited Ukraine frequently to be with Anna and they married there in late 2020. They now live in southwest England with their young son.

'In early 2019 Anna started telling me about this place where her grandmother was from, this village Balakliya,' says Marc. 'When I went there for the first time in the summer of 2019, I think her mum was with us and her sister's kids so it was like an amazing family road trip in a lovely Renault Twingo, from Kyiv to the centre of Ukraine. It was a soft-top car, so kids were hanging out, dogs, the whole lot, passing through this beautiful, peaceful landscape at the time. It was everything Anna had described to me and more, especially for me as I've always lived in cities.'

Capturing connections The images Marc made from his visits to Balakliya from 2019-2021 are simple, beautiful and capture the essence of life and the deep connection to the land. Children swim in the river. families chatter in the shade of fruit trees. livestock idle in the lanes, pickles and preserves are stacked in jars, dusty roads stretch towards green meadows, the light is dappled, pictures fade on dressers, laundry dries in the breeze and sunflowers bow in the field. Then on 24 February 2022, war came. Drones and missiles flew overhead. Of the 360 residents of Balakliya, 49 of them are now fighting on the frontlines. Two are already dead.

Marc and Anna did all they could to help from a distance, getting friends and family out, sorting visas and places to stay, raising and donating thousands of pounds from print sales. 'We wondered what we could do differently, more longlasting, not just raising some money but to try to show people what was

beautiful about the country and why people were fighting, staying and dying for Ukraine,' explains Marc. *The Land is Yellow, The Sky is Blue* is their response.

Taking advantage of their son being at nursery, around 300 6x4in prints were laid out on the carpet, a lot of coffee was made and Marc and Anna began to edit. As a vehicle for editing, the 55 images in the 100-plus page book are sequenced into three days - morning until night. Each day is separated by an illustration made for the book by Mykhailo, 13, Mariia, 10, and Antonina, 8. The siblings learned to swim in the Psel River that flows by Balakliya. From hiding in their basement as tanks rumbled past, they have found refuge in the United Kingdom and are now known by their new English friends as Misha, Masha and Tonya.

The book is bright and colourful, the folded soft cover and paper

'We wanted to show people what was beautiful about the country and why people were fighting, staying and dying for Ukraine'

tactile. The empty spaces and pages give the images room to breathe. 'I always have dreams of what the book will do but I don't expect everyone to get from it what I would hope for,' says Marc. 'I know that people will always get something from it depending on what they put into it. Our dreams are that people will look at the work and understand why people are fighting, dying, but also just see a beautiful place that they'll want to go to. A place where they recognise themselves, that's a really important thing.'

Whole life

The dual-language book in English and Ukrainian combines Marc's photographs with text written in the context of the current war. The introduction is written by Anna, with additional texts by Larysa Shyposha, Iuliia Budnik and Dmytro Vygovskyi, each of whom have a unique connection to both Balakliya Left: 'Nataliia'. Marc's images document moments in everyday life in Balaklia before the war

Right: Towels and swimming costumes drying, following a family swim in the river near the village

Left: Sometimes Marc has simply documented interior scenes in village buildings, such as this image, 'Babusya Mariia's house'

and Ukraine. As Larysa writes: 'The village has become empty, and this is really noticeable. Most men who used to operate tractors and combine harvesters have gone off to war. The agro-industrial group where I work has a shortage of machine operators and tractor and combine drivers. That's why the sowing was so slow.

'During the winter, many fields were not tilled or ploughed. We simply didn't have enough time. Now the fields are overrun with weeds. The women could use the men's help around the household. In Balakliya, for example, lives a woman with five children. Her husband is fighting at the front, and she keeps a lot of livestock. No hay was made, and her children were cold in the winter because there was no firewood. The community helped her – they sent young men to cut firewood and bring hay. We all help.

'For me, Balakliya is the most beautiful place, my beloved homeland, which I would never trade for another village or town. This is my home; this is my sky, my lake; this is my Balakliya. My whole life is here.' Far left: 'Rimma, the daughter of Yanyk and Iuliia'. Marc says he felt compelled to record village life unfolding from when he first arrived in Balakliya in 2019

Right: An idyllic landscape image captured in Balakliya, in August 2021

'This is my home; this is my sky, my lake; this is my Balakliya. My whole life is here'

Marc abandoned his trusted, technically precise use of photography and took a simpler, less obtrusive approach in Balakliya, using Leica digital rangefinders. This method of working helped his subjects relax and behave naturally. The ordinary lives portrayed in *The Land is Yellow, the Sky is Blue* have been made remarkable by war. The book finds a way to show the beauty, tranquility and the wonder of a place and also the strength of the land, the determination of the people, the hardship and the values they're fighting for. It is difficult to look at these pictures blind to what's happening today in Ukraine. It's also about the meaning of village and community that resonates beyond borders. It presents a moment of peace between generations familiar Above: Farm building. Marc's images include peaceful landscapes that emphasise the connection between the community and the land

Left: A piece of writing by Marc's wife, Anna, from when she was aged nine in 1997

Marc and Anna have set up a fund to directly support the community in the village of Balakliya, Ukraine. For every signed book bought, £5 will go to this fund. For every special edition, £25. To buy a copy of *The Land is Yellow, the Sky is Blue*, see **bit.ly/marcwilsonland** or you can visit **www.marcwilson.co.uk** with a history of disaster, genocide and conflict. 'The people are you and me. It's just that forces and pressures from the outside have turned them into characters in the book,' says Marc.

'The blue and yellow of the Ukrainian flag symbolise the clear blue sky above the fields of wheat that cover our land,' Anna writes in the introduction. 'In the Ukrainian language, the concept of zemlya or "land" has several meanings. It is the territory and the soil cultivated by the hard work of the people. It is the Motherland. Ukrainians have a deep connection with the land and the villages. We return to the villages to plant our gardens and harvest the crops together with our families. This is more than a tradition, it is an act of love, a show of our respect for our families and our native land.'

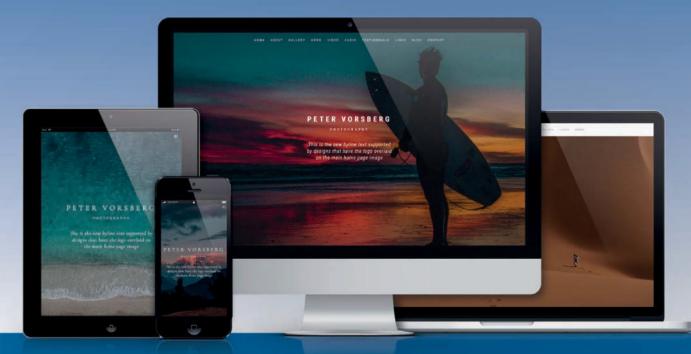

Marc and Anna long to be able to travel back to Balakliya with their families when the war abates. Marc concludes: 'We dream of teaching our young son to swim in the river with his cousins, of him helping me to draw water from the well, and of watching the stars at night with him as his ancestors have done before.'

When was Colchester PS founded? 1939.

What does your club offer to new members?

Fun, friendship and a way to improve their vision and photographic expertise. Many of our members are highly skilled and there is always help and advice available to those who might need it.

Describe a typical club meeting

Members start to arrive around 7pm for an early chat. Formal proceedings begin at 7.30pm with a warm welcome and introduction to that evening's entertainment. We take a break around 8.30pm, with free coffee, tea and biscuits provided, and the meeting concludes by 10pm. The annual programme includes outside lecturers, competitions and in-house presentations.

Do you invite guest speakers?

Yes, we regularly host talks by guest speakers. The variety, originality and balance of our programme, which runs from September through to May, plays a key part in our success.

Do members compete in regional or national competitions?

Most definitely. In addition, the club also competes with others in the Federation, one national and two international competitions. One such competition, 'The 8x8', unique to Colchester PS, is where eight clubs are invited to participate, each submitting one print from eight of their members. With a buffet provided, this always proves a terrific evening's entertainment.

www.amateurphotographer.com

Join Club

Fun and friendship are important parts of the ethos of Colchester PS

How many members do you have?

We concluded last season with a total of 96 members, making us the second largest club in East Anglia. We have a cap of 100 Full members, to make competition entries manageable. However, if we already have 100 Full members, then Associate membership is temporarily available. Our Associate members enjoy all the same benefits as Full members, the only difference being that they cannot enter the League competitions. Naturally a lower fee exists to reflect this.

Are any residential trips or outings planned?

Prompted by a membership survey, we now have monthly planned outings/workshops, especially during the summer. These events cover topics that have been requested by our members.

Do you have any funny stories about the club?

Photography is important to us all, but our overriding ethos is that club nights should be fun nights. Naturally we have enjoyed lots of funny moments. On one occasion a creative image was entered into a competition, originally captured during a club outing, which featured the idea of herrings being put through the mangle of an old washing machine to create a kipper, the title being 'Kipper Production Line' (see above). The judge on the night stated that he didn't appreciate this was how kippers were produced and he meant it!

What are the club's goals for the future?

To simply continue with our success in bringing fun and friendship, and enhancing the photographic enjoyment of our members.

7 Closing In by Paul Douglas Two defenders attempt to thwart the run of a determined attacker in this sports action shot 8 The Artist by Eddie Campbell A quiet and contemplative image showing a painter deep in thought as she surveys her work

Club essentials

Colchester Photographic Society

Christ Church, Ireton Road, Colchester, Essex, CO3 3AU

Meets: 7.30-10pm on Tuesday evenings from September to end of May, with informal meet-ups and workshops taking place throughout the whole year

Testbench VINTAGE FILM CAMERAS

In America, a group of men pose for a While-You-Wait picture, presented to them soon after as a postcard

FILM STARS Wait for it!

John Wade remembers when 'instant' photography meant a five-minute wait

hanks to the magic of digital photography, these days we all expect to see a picture a nanosecond after it has been taken. Even Polaroid's one-minute wait for a picture, that seemed miraculous when it was first demonstrated 76 years ago, seems superslow now. But go back further, to the turn of the 20th century, and you find people amazed to see a picture of themselves within five minutes of exposure. This was the peak of speediness when photographs were usually shot on glass plates, followed sometime later by a lengthy darkroom development process to make a negative, before printing onto sensitised paper to make a positive.

While-You-Wait pictures were offered by photographers to people in the street, at fairs, carnivals, on holiday beaches and occasionally in studios, using specialised cameras. The cameras remained popular into the 1950s and, in some parts of the world, they are still in operation today.

In the early days, While-You-Wait cameras mostly produced ferrotypes, more commonly known as a tintypes. These were made by coating a photographic emulsion onto a very thin sheet of black-backed metal. When developed, the exposed emulsion appeared in a limited range of white/grey tones representing highlights in the image, while the unexposed, or less-exposed areas remained

While You

THE "APTUS"

The "APTUS" AUTOMATIC FERROTYPE CA

CAMERAS

MANDEL-ETTE

transparent, allowing the black backing to show through and represent the shadow areas. Thus a direct positive image was produced straight from the camera.

The Nodark

Made by the Popular Photograph Company of New York in 1899, this is one of the earliest While-You-Wait cameras. It's a long, wooden box with a 5in f/10 meniscus lens and a simple sector shutter fired by a knob on the side. In a darkroom, 26 ferrotype plates were loaded into a rack which was slid into the camera. The back was closed and everything else carried out in daylight.

A small flat tank was filled with developer and attached to the base of the body. After exposure, a lever was pulled from the side to open slides in the base of the camera and across the top of the tank, allowing the exposed plate to fall into the developer. The slides were closed, the tank removed and, after a few minutes, the developer was poured out and replaced with water, then fixer. The developed ferrotype was removed from the tank, which was washed, refilled with developer and slid back into place on the camera. An extremely ornate knob on the side was turned to advance the rack of plates and bring the next one into position for the following exposure.

Given that no darkroom was needed for processing the ferrotype plates, the name Nodark was a good one. Unfortunately, Kodak thought the name sounded too much like their own, sued for infringement of trademark and won. And that was the end of the Nodark.

Fallowfield's ferrotype cameras Jonathan Fallowfield was a British photographic supplier who sold a range of While-You-Wait ferrotype cameras in sizes from $1\frac{1}{2}x1\frac{1}{4}$ inches to $2\frac{1}{2}x2$ inches. All the cameras were made of wood. Plates were preloaded into magazines from which various forms of mechanical manipulation extracted them one at a time and placed them behind the lens for exposure. Some early cameras were designed with containers of developer, fixer and water actually inside the body. More mechanical devices were employed to lift plates from their exposure positions, then dunk and agitate them in each of the solutions, before passing a finished positive image out through a light-tight flap to the photographer who gave it a quick wash before handing it to the person being photographed.

Later cameras moved the developing tank to the outside of the body into which plates were mechanically dropped after exposure. This coincided with the introduction of a new kind of processing solution capable of both developing and fixing a plate in one go rather than the more conventional method of having to develop, wash and fix.

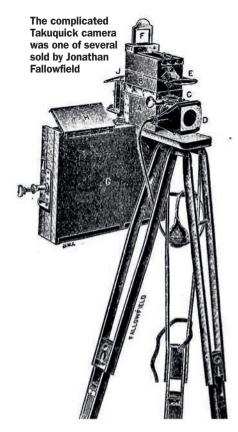

Camera names from Fallowfield during

Three ferrotypes in their cardboard presentation frames, shot sometime in the 1920s using the Aptus camera described later in this article

Testbench VINTAGE FILM CAMERAS

the early 1900s included the Self-Contained Automatic Camera, the Takuquick, the Button Magnet Camera which produced small circular ferrotypes for incorporating into brooches and other pieces of jewellery, the Taquta and the Popular. Most While-You-Wait cameras at this time cost around £5-10. At just £3, the Popular was the cheapest on the market in 1908.

Chicago Ferrotype Company While-You-Wait cameras were very popular in America, where one of the best-known manufacturers was the Chicago Ferrotype Company, based in Chicago and New York with a UK branch in Liverpool. One of the company's advertisements claimed that street photographers using their cameras could make a profit of 8 cents per picture. Another suggested that an operator might shoot and process 360 pictures an hour – which might have been a little optimistic.

The cameras produced ferrotypes and, later, direct positive postcards, which coated the emulsion onto card rather than metal. Models included the Mandel No.1, No.2 and No.3; the Mandel Junior; and the Mandel-Ette. Image sizes ranged from $4\frac{1}{2}x3$ inches down to $3\frac{1}{2}x2\frac{1}{2}$ inches. Methods of working with each of the cameras was very similar. The bodies were box-shaped with elasticated sleeves that protruded from the back, into which the photographer slipped an arm to manipulate the apparatus within. In this way, plates or cards were introduced into the

Three ferrotype cameras made in Chicago: Left, the small Mandel-ette, showing its basemounted developing tank and cloth sleeve. Centre and right, with their tanks detached, the much larger One Minute Camera and Mandel No.1

camera, dropped into a holder and placed to bring them in line with the lens. Exposures of between half and three seconds were necessary. After exposure, the photographer again placed a hand inside the camera by way of the sleeve, took the plate or card from its holder and dropped it through a slot in the base of the body straight into the one-shot developing and fixing solution. The developed image could be removed in one minute and then washed for about 15 seconds before being handed to the satisfied customer.

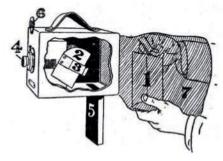

Also, from the same company in 1910 came the Wonder Photo Cannon that took its name from a cannon-shaped body. The camera produced small, circular ferrotypes, for turning into photo badges. The plates were held in a tube and, as each one was exposed, it was released to fall through a duct into a developing tank, where it was processed into a positive image.

Dandycam

About the size and shape of a traditional box camera, the Dandycam from 1911 was used to produce 1in diameter circular ferrotypes within minutes of exposure. The plates were loaded into the side of the camera and held in place by a strong spring. A lever on the side of the body was pulled out and pressed in again to push the first plate into position for the exposure. The lens, situated in the top left corner of the front of the camera, directed its image via an internal angled mirror up to a round viewfinder on the top of the body. This was covered in red glass because the viewfinder looked into the body and unfiltered light would have spoiled the plates, which were insensitive to red light.

Exposure was made by turning a knob on the side of the body that lifted the mirror, allowing light to reach the plate. When the knob was released the mirror fell back into its original position to cut off light to the plate, completing the exposure and restoring the mirror's image to the viewfinder.

After exposure, the previously used

The Dandycam shot circular tintypes – and it's an early form of single lens reflex as well

How the plates were held in position inside the Dandycam

lever was again pulled, which released the plate behind the lens to fall into a tiny developing tank in the base of the body, containing a one-shot developing and fixing solution. The images so produced were designed to be inserted into small pieces of jewellery.

The Aptus

The Liverpool-based company Moore and Co introduced the Aptus with a different take on the While-You-Wait theme. Initially launched in 1913, the camera had an extremely long life, with updated models still in production as late as the 1950s. The camera was shaped as a large box mounted on a tripod. The shutter was incorporated into a door, which opened and closed over the lens inside.

Ferrotype plates were loaded emulsion side down into a magazine inserted horizontally into an opening at the bottom of one side of the body. A cover was then withdrawn from the magazine so that the plates could be accessed by a mechanism inside. A lever on the outside was turned through 90° to lower an arm inside to just above the magazine of plates. A rubber bed at the end of the arm was attached to a tube that ended in a rubber bulb outside the camera. The bulb was pressed to expel air while a spindle beneath the camera was pushed up to bring the first plate into contact with the rubber bed. The bulb was released which created a vacuum and the suction caused the plate to attach itself to the bed.

The arm was then returned to its original place, which brought the plate attached to the arm into the right position for an exposure. The shutter was released by a cable attached to the front of the camera. The rubber bulb was then pressed again, which expelled air from tube and the rubber bed, allowing the plate to drop into one of two developing tanks beneath the body, each containing a one-step developing and fixing solution.

Rotating the tanks through 180° brought the one containing the ferrotype to a position for removing the plate while placing the second tank into position ready for the next one to drop. Because the pictures were on metal plates, and therefore magnetic, they were extracted from the tank by a magnet so that the operator needn't get his fingers wet. The extracted plate was then washed in a bucket of water, dried and sometimes placed into a special cardboard mount, ready to be presented to the customer. By 1930, ferrotype plates for the Aptus had been replaced with sensitised blackbacked cardboard.

Testbench VINTAGE FILM CAMERAS

The Jano While-U-Wait Camera for shooting pictures on sensitised cards

PDO The acronym by which this strangely shaped camera was known stood for 'Photography Done Quickly'. The camera was launched in 1935 by the American PDO Camera Company, formerly the Chicago Ferrotype Company. It shot pictures 6x9cm on rolls of what the makers called Super Speed Direct-Positive Photo Paper, which produced positive images when processed in one-shot chemistry. Turning a handle on the side of the body released the paper and placed it behind the lens. After exposure, the photographer pulled a knob which activated a cutter that sliced through the exposed paper, allowing it to drop into the developing tank below. After a few minutes in the tank's processing solution, a positive print was produced.

Photo-See

The American Photo See Corporation made this small box camera in 1936 to shoot and develop an image in five minutes. It did so by encasing single sheets of film in light-tight sleeves. With the camera closed, the film was extracted from the sleeve by a mechanism on the back of the body, the picture was taken, and then the film was re-inserted into its sleeve. Using a similar process, the sleeve was then placed in the camera's special developing tank and processed by chemicals poured into and out of spouts on the front of the tank.

Jano While-U-Wait

Picture cards, rather than ferrotype plates, were employed in cameras made by a company called Janovitch, established in London where it began making street cameras in 1930. Early Janovitch cameras employed the external developing tank system. But by the time this model was launched, as late as 1954, the camera was shaped like a large box with a light-proof elasticised sleeve covering a circular opening in the back of the body with two drawers below it. One of these held developer,

The twin drawers in the back of the Jano which contained developer and fixer and, above them, the elasticated sleeve used to manipulate items inside the camera

while the other held fixer.

With the camera back open, the picture was focused on an internal ground-glass screen by twisting a knob on the side of the body that moved the screen back and forth. Closing the back, the operator slid an arm through a sleeve and into the inside of the body to position the picture card behind the lens. After exposure, the photographer again inserted his arm into the sleeve to manipulate the card and manually drop it into the tray of developer and then fixer, while viewing development through a red window on the top of the camera. After fixing the negative image, the card was removed and placed in a cradle attached to the lens to be re-photographed, development taking place as before. Because the negative image was rephotographed as another negative, the final result was a positive picture.

Speed-O-Matic

This was a Bakelite camera that took pictures on direct positive paper, sold two sheets at a time in light-tight sleeves. A sleeve was slotted into one end of the camera and a lever pulled to extract the paper and place it into position for shooting. A built-in extinction meter supplied a number that was set on a dial beneath the lens to adjust the aperture for the correct exposure, the shutter was released, and the paper pushed back into its sleeve.

The sleeve was then fitted into a holder that was attached to a developing tank and another lever used to pull the paper from the sleeve, and into the tank. Four developing solutions were poured in and out of the tank via a tiny funnel at the end of a rubber tube, after which the developed picture could be extracted.

Unfortunately for the American Speed-O-Matic Corporation that made the camera, they chose 1948 to launch it, which was the year the first Polaroid camera also hit the market. Truly viable instant photography had arrived and the Speed-O-Matic drifted into obscurity.

The Kookie

There is a final postscript to the While-You-

The Speed-O-Matic with its developing tank and the holder that transfers the film from one to the other

Wait camera story, and it came in 1968. The Kookie was launched by the American Ideal Toy Company. The camera stood at the top of what appeared to be a complicated system of pipes emerging from a manhole cover. Protruding from the side was an arm and a hand holding a flashgun that accepted flashcubes. Beneath that, another arm and hand held a tray with a tin of tomato soup on it which was actually a lens hood.

As each picture was taken, a cutter was operated and the paper fell into a developing tank below the body, in which a one-shot solution produced direct positive images. A built-in egg timer was used for measuring the three-minute development. The result was a small, square direct positive image. The camera was sold with props for people being photographed that included a stick-on moustache and hats. There was also a mirror accessory that produced strange distortion effects rather like an anamorphic lens and a two-sided body poster with a cut-out for the subject's face. One side showed a muscle man, the other a bathing beauty.

It was a strange ending to what had once been a thriving and popular, if somewhat unusual, branch of photography.

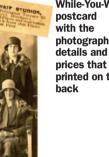

A ferrotype in its presentation case with the photographer's name stamped on the back

OF RON COSEN

A studio-shot While-You-Wait photographer's prices that were printed on the

My favourite kit

Bryan Evans

A relative newcomer to photography, Bryan Evans reveals the route he took to shooting landscapes with his **Sony Alpha A7R IVA**

Bryan Evans has been a photographer for three years and lives in Aberdeen. To view more of his work, visit **www.withbryan.co.uk** He can be followed on Instagram **@with.bryan** where he currently has 80k followers

AP: Tell us a little about your photography background

BE: In a rather clichéd attempt to 'find myself' I started spending more time travelling around Scotland and Europe in 2015. I enjoyed taking photos whilst seeing new places, but for several years, it was simply with my phone. But the frustration of Covid lockdowns brought about the realisation that I had taken so much for granted right on my doorstep, and that I really enjoyed the creativity of taking photographs. But the phone itself was limiting.

At the end of 2020 I bought a used Nikon D810 from MPB as I felt there was great value in the used market. especially for what was a new hobby. It took a while to get to grips with settings, but I found I had a natural eye for composition. From then on, it was really just self-taught through trial and error. I got into editing photos using Lightroom and found that in itself really enjoyable. But the best aspect that really got me hooked was that it was something I could do either by myself or with friends. It encouraged me to keep exploring and enjoying the outdoors, and then afterwards reading up about some of the locations, in particular the castles and their history.

AP: If we were to take a look in your camera bag, what would we find in it?

BE: For a start, a bottle of midge

repellant for summers in the Scottish Highlands, along with the midge face net! But the headline items are my Sony Alpha A7R IVA, Sony FE 24-70mm F2.8 and 70-200mm F2.8 G Master lenses, again all bought second-hand (the first experience was so smooth it just made sense to go down the same route). I also have a DJI Mavic 2 drone that is ideal for capturing different perspectives and I love using it at coastal locations or where you can really show off the grand surroundings of a location from the air. Between all of that hardware, filters and my frequently used cleaning kit. it is just as well I can carry a 30-litre bag on my back on what are often long walks.

AP: If you could pick one item of kit you couldn't live without, what would it be?

BE: I would have to choose my camera body. I could make do with either lens in most situations, my drone can be used in certain places and it has a different element of 'fun' to it, but I often don't use it at many locations or situations. However, I would be absolutely lost without the body, my Sony Alpha A7R IVA. I couldn't imagine life without it.

AP: Did you buy it from new?

BE: I have bought both cameras and all lenses used. Photographers are sensible people looking after their kit

and I bought from the same source twice with no issues. It offered great value with peace of mind and I don't think I would ever do differently.

AP: Can you tell us how you find the camera performs in use?

BE: At first I found it weird going to the smaller compact mirrorless camera from the larger body, but I love it. The flip screen is ideal for shooting low down without having

to lay prone like a sniper, especially with a dodgy knee! The menus are easy to navigate and the layout easy for in-hand shooting. Importantly, it is nicely weather-sealed and robust for the Scottish elements which can be somewhat volatile. The colours produced, the speed of autofocus and the low-light shooting have been big improvements from my previous set-up. A slight reduction in the weight of my kit bag was a definite boost, too.

Below from left: Horgabost on the Isle of Harris; Bonskeid House in Perthshire; Kilchurn Castle in Argyll

AP: Is there a standout photo you've taken using the camera? BE: I do feel my photographs have taken a step forward since making the switch and I guess I associate favourite photos with the moments in time that I savoured. It becomes quite hard to pick a specific image or moment, as ultimately it is a hobby that has taken me to so many places. The one real standout is probably the vast improvement in my mental health from photography, enjoying the moments and the therapeutic nature of editing.

AP: Have you identified any disadvantages?

BE:. The one thing I absolutely would change would be to have a cover over the sensor, to reduce dust or other particles ending up on it when changing lenses. It's a big difference from using a DSLR and is less forgiving. Spot corrections in Lightroom can be a pain when you've not been careful! **AP: What would you say to people considering the camera?** BE: Buy a camera full stop, but if you can't, use your phone. Find time to improve the way you see things, get outside more, see new places, and

The 'A' variant of the A7R IV is the same as the original model, but with a higherresolution 2.36m-dot LCD Sony A7R IVA, FE 24-70mm F2.8 GM at 26mm,

4 seconds at f/22, ISO 80

AP: Do you have any plans to upgrade your current kit?

don't continue to take things for

granted that are on your doorstep.

BE: Having just swapped from the Nikon DSLR system to the Sony mirrorless, I cannot imagine I will be changing anything for a long time! I will likely upgrade my drone soon, as one of my best friends just bought the Mavic 3 with the ability to zoom for compressed footage and shots, and it's a great feature. But I need a little more justification for changing from what is a perfectly good drone.

AP: How will your kit bag look ten years from now?

BE: Hopefully well used and full of memories...

GoPro Hero 11 Black Mini

Can GoPro's Hero 11 Black Mini prove small is indeed beautiful? **Geoff Harris** finds out

• £299 • gopro.com

The GoPro range of action/dash cams is well established and widely emulated, and the Hero 11 Black Mini is the latest in the company's range of more affordable 'mini' iterations. From the get go, it's very easy to set up. Although my review unit didn't have the fittings to fix to my motorbike, the base plate sticks well to a helmet via the Scotchlite pad. Operation couldn't be simpler; once the Micro SD card is in place and the battery charged, you press a big button on top to start recording.

The quality of footage is impressive. In use, HyperSmooth 5 stabilisation makes a big difference to the quality of the video recording, especially when barrelling along the UK's bumpy road surfaces, and it's automatically applied for optimum results. On a particularly rocky ride you can set it to High or Boost, but the latter brings a slight crop.

The video quality and stabilisation also hold up well when recording 4K at 120fps. You can also pull 24.7MP stills from the video, though there is no dedicated Photo Mode as with the Hero 11 Black Mini's bigger siblings, and you can't shoot raw. It is possible to record star trails, however, and even go in for some light painting if you feel the urge.

The main downsides are the lack of a rear LCD, though there is a rather titchy top screen to check settings, and a built-in (rather than removable) battery. It lasts up to three hours, which isn't particularly generous, but charges quickly via USB.

While generally well-thought-out, the design isn't perfect. The mount-attachment thumbscrew is easily lost, as I discovered; some kind of integrated screw would definitely be helpful. Second, the recording on/off beep notification isn't always loud enough through a helmet and earplugs. I struggled to hear it when about to ride off, and pulled into a layby several times to check the camera was still recording, which soon got annoying. Some kind of vibration feedback would come in useful.

In addition, 'Mini' is a relative term here, as the camera is only about 20g lighter than its new big brother, the GoPro Hero 12. That said, the latter costs £100 more, so many users will probably decide they can live without its rear LCD and other advanced features.

Verdict

Despite a few niggles, this is a well-designed action camera that records good-quality, well-stabilised footage, with a nicely compact form factor.

Lens

The lens is nicely recessed and protected, and there is a removable lens cover.

Simple operation

The power button is on the front, while the idiot-proof record button sits on the top of the unit.

Water resistant

The tough outer shell is waterproof to 10 metres, and the unit looks cool too.

Folding finaers

Retractable 'fingers' make it easy to attach to the base plate (they are also on the back).

At a glance

- 5.3K video up to 60fps
- 4K video up to 120fps
 2.7K video up to 240fps (8x slow motion)
- 24.7MP still resolution
- 10-bit colour

THE QUIK APP

You download the Quik app to control key settings and review/transfer the video, though basic settings can also be adjusted via the top screen. The app works well, and also includes a simple but effective video editor – which saves time on your main computer.

ELAST FROM THE PAST Cosina CSM with AEC adapter

John Wade discovers weird automation from 45 years ago

LAUNCHED 1978

PRICE AT LAUNCH approximately £60 (camera and lens only)

GUIDE PRICE NOW £40-50 (with AEC)

Cosina was never up there with the likes of Canon, Minolta, Nikon, Olympus and Pentax. But the company sold a lot of 35mm single lens reflexes (SLRs) under other names. Some, though by no means all, of the cameras sold as Petri, Vivitar, Ricoh, Miranda, Exakta, Olympus, Voigtländer, and more besides, were actually restyled and rebadged Cosinas. And of course the company made SLRs under its own name too – around 40 with both M42 screw and K bayonet lens mounts.

Launched when most SLR manufacturers were switching from screw to bayonet mounts, the Cosina CSM hung on to the old M42 screw, which today means it is compatible with a huge range of inexpensive lenses from numerous makers. First pressure on the shutter release stops down the lens and activates the meter, with LEDs in the viewfinder to signal correct exposure plus over- and underexposure. The electronic focal plane shutter runs 4-1/1,000sec with a manual speed at 1/60sec. Everything is powered by two 1.5 volt LR44 or equivalent button cells.

So far, so conventional. But now meet the camera's AEC adapter. The acronym stands for Automatic Exposure Control. It runs on a single 4G-13 or equivalent 6-volt battery and slips into the camera's accessory shoe while mating with the shutter speed dial. A cable from the side plugs into what looks like, but isn't, a flash sync socket beside the lens. This gives the CSM an early form of aperture priority auto exposure, though controlled in an unusual way. Turning the aperture ring feeds exposure

The Cosina CSM with its AEC adapter that adds an unusual form of aperture priority control

COSINA

information via the attached cable to activate a tiny motor inside the accessory. Incredibly, this physically rotates the shutter speed dial until the correct exposure has been attained, when the dial stops and the appropriate exposure LED lights up in the viewfinder. The AEC adapter also works with the M42 mount Cosina CSL, CSR, and K mount CS-1 cameras.

What's good Inexpensive but usable SLR even without the automation accessory.

What's bad If the shutter dial has stiffened with age, the AEC becomes unreliable.

DSLR Lenses

Interchangeable lenses come in a huge array of types for shooting different kinds of subjects

IN GENERAL, the easiest way to expand the kinds of pictures you can take is by buying different types of lenses. For example, telephoto lenses let vou zoom in on distant subjects, while macro lenses enable close-ups of small objects. Large-aperture lenses allow you to isolate subjects against blurred backgrounds, or shoot in low light without having to raise the ISO too high. Meanwhile, all-in-one superzooms cover a wide range of subjects, but usually with rather lower optical quality.

Built-in focus motor Most lenses now incorporate an internal

motor to drive the autofocus, although some are still driven from the camera body. DSLR lenses often use ultrasonictype motors for fast focusing, but some now have video-friendly stepper motors as widely used in mirrorless systems.

Lens mounts

Each manufacturer has its own

Nikon lenses, although you can

them with the right mount.

use independent brands if you get

lens mount and most aren't compatible with one another. For example, a Canon DSLR can't use

Filter thread

A thread at the front of the camera will have a diameter, in mm, which will allow you to attach a variety of filters or adapters to the lens.

Maximum aperture

Wider apertures mean you can use faster. motion-stopping shutter speeds.

Be FIRST to learn about all the latest new products for 2024 by signing up to our newsletter, following us on our social channels, or by visiting www.parkcameras.com.

"The exact product I was searching for, in stock, good price and very carefully packaged up with super fast delivery. Excellent service!"

"Very informative the guys really know their stuff. Nothing was too much trouble."

"Great service as always. My go-to store for all my camera needs."

"This is how internet shopping should be!"

"Highly recommend popping in if you need anything camera related, old or new." "Never seen a camera shop with so many varieties of camera from film to digital, clearly shows a lot of passion and hard work!"

"Quick delivery and great products!"

"Really helpful staff and a fantastic selection of kit. Definitely going back. Still smiling."

"Great customer service, and would recommend to anyone, thank you guys"

"Pricing is competitive, service is friendly, and the knowledge runs deep. What's not to like?"

Final Analysis Tracy Marshall-Grant considers...

'Winter Swim' by Billie Charity

his image is by one of my friends and colleagues here in Wales and is of a wild water swim in winter. The swim pictured, like many which now appear in our local rivers during the colder months, was started locally by a group in the pub talking one evening, and after 20 years has become a winter season tradition with a trip to the same pub to finish off. Wild water swimming during winter months has long been regarded as providing not only a health benefit but also a real chance for communities to join together in a moment of fun. This image is one of my favourites capturing such an event.

Exhilaration

This picture shows that moment of exhilaration and excitement when the first shot to begin the swim is fired people running in with trepidation and fear on their faces combined with hysteria and laughter. The onlookers cheering them on like mad with great amusement on their faces, and warm hats on their heads! The harshness of the trees in the background and the leafless branches really bringing home to the viewer that tight cold winter air that must be seeping through their nostrils as they run. I can feel the cold nip of the air as I write this and that damp sharp feeling of the winter grass beneath my feet.

The colours in this image stand out for me particularly, the dark warm green of the grass, the reds and oranges of the clothes against what inevitably will be a stark cold

harness in temperature. The warmth of the atmosphere of friendship and camaraderie comes through in Charity's colour emphasis, really bringing home the feeling of community from which this particular swim has evolved.

As an award-winning portrait and reportage photographer, Charity's work centres on people, in both formal and informal settings, capturing individual characteristics and beauty in the simplest actions. This picture - like her work with Hay Festival, National Theatre Wales, the National Trust, the Brecon Beacons National Park Authority and The Poets' Society - does just that. The faces of the women taking images of the swimmers on

'The warmth of the atmosphere of friendship and camaraderie comes through in Charity's use of colour'

their phones, the expression of terror on the women in the centre of the front line of swimmers, the humour on the faces of those clapping and cheering in the background are all individually highlighted in the image and are like small separate portraits in one large collective picture. The observation by Charity of all these individual expressions, and the differing reactions to a similar situation, reflect a real capturing of the variety of people within a community such as this.

With the increase in issues around the health of rivers and

sewage in water, it is sad to think this will impact inevitably on the traditions of winter swims. The joy and fun of such events, not to mention the health and well-being benefits, should not be allowed to be affected by the ongoing lack of action by government and councils to deal with sewage dumping in our waters. Images such as this by Charity and others who record the UK's new year swims should be looked at as illustrations of what can also be lost so easily from our annual activities.
